### DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 3, 6, 9 and 11 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Lane and in view of Kato et al and Robinson.

4. Lane specifically teaches a processing aid as claimed with a core-shell structure from the same monomers as claimed by applicants. The products are also made by emulsion polymerization and possess the same molecular weight as seen in table 2. The monomers as claimed are exemplified except that the reference adds a small amount of crosslinking monomer. This, however, is not excluded by the "consisting essentially of" language of the claims since the products are taught for the same use. Even though the reference uses a different free-radical initiation system than is stipulated by applicants' claims and does not mention the chain transfer agents, it is reasonable to presume the products made essentially the same way from the same monomers would produce products that are the same, In re Fitzgerald Et Al, 205 USPQ

Art Unit: 1713

594. The examiner has presented a reasonable presumption that the teaching of the reference is the same as the requirements of the claims. Under *In re Fitzgerald* practice, it is now incumbent upon Applicant(s) to present evidence of difference between the claims and the teaching of the reference in order to overcome the rejection.

Alternatively, since references to Kato et al and Lang teach making similar polymers using the claimed initiation system and chain transfer agents, it would be prima facie obvious to one of ordinary skill in the art to substitute known free-radical systems one for the other and to use chain transfer agents as taught by references to Kato et al and Lang absent evidence of unexpected results commensurate in scope to the claims.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
